

In the first chart, I want to show the amount of data about sports. In this bar chart, we can find out which sports are most popular. And obviously ice hockey and skiing are the most popular sports in the Olympics winter. Second chart shows the changes in the number of participants in each sport every year. Therefore, I find skiing is the sport that has increased the most. Third chart shows the proportion of men and women taking part in the competition. The proportion of men is more than women join the games. The last chart shows the amount of men and women who got the gold medal in these three years. I made this chart because I want to show the difference of gold medals between men and women in these three years. And also I found that there are significant gaps between the amount of gold medals received by men and women in 1924. However, the gaps between the amount of gold medals received by men and women are small in 2014. I made these types of charts for the reader in order to make them easy to understand and find out the data quickly.
